

- GRAVIMETRIC AND VOLUMETRIC DOSAGE SYSTEMS
- CONVEYING AND FEEDING SYSTEMS
- GRANULATORS

IN THE HEART OF ENGINPLAST

www.enginplast.com www.enginplast.com www.enginplast.com

We build solutions

Since Egin Plast was born, in 1975, our mission has always been focused on the **creation of innovative and custom-made solutions**, able to ensure a **lasting and tangible benefit**.

We are in the business of dosing, monitoring, recovery and transport of **plastic and non plastic materials**.

Today we represent a point of reference in **designing, producing, marketing, and setting up dosale systems, transport of polymers - granules, ground materials, and powders - and heavy-duty granulators with a low environmental impact**.

Having the natural bent to search for **custom-made solutions** too, in order to ensure a proper answer to the needed requirements, we have refined a wide technical and commercial specialization. We are tenacious in pursuing an aim that unites the whole business world: **excellent products, minimizing costs**.

The research facilitates the achievement of this target and the advantages affects also the environment, with **technologically advanced solutions and low energy consumption**.

A guarantee that comes from experience

Our range of **auxiliary equipments** includes:

- Dosage systems
- Granulators
- Materials conveying systems

related to all applicative sectors of the plastics market:

- Extrusion
- Blow
- Injection and moulding
- Recovery

and addressed to our **customers**:

- Manufacturers of production lines
- Users who transform raw materials
- Dealers

The years of experience in this field are the concrete evidence of the continuous effort, spent to **innovate, improve, better, optimize the internal organization, the technologies and the know-how**, so as to be always up to the expectations of a changing market.

The importance of precision

We offer a wide range of products both for dosing and for mixing, suitable for different types of materials such as powders, ground materials, and granules.

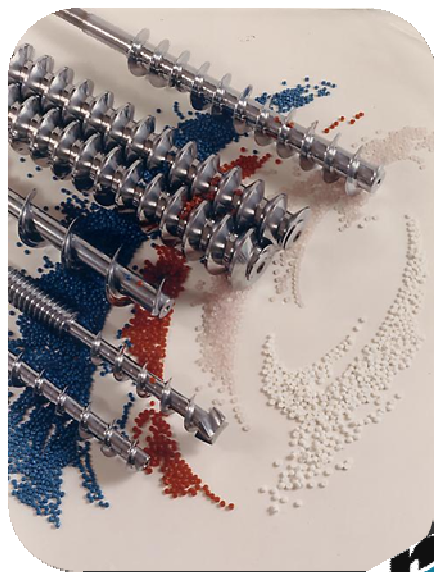

Dosage systems can be integrated in different application fields where plastics are used: extrusion, moulding and blow.

We ensure a very high level of precision that allows to:

- obtain a sure economic advantage on raw materials,
- guarantee the high quality of the finished product,
- reduce the plastics waste.

The three-dimensional design system CAD and the qualified operators who manage it, contribute to ensure accuracy and high definition of each project.

The electronic part, supervised by the software Design Office of the company, contributes to mark out the machineries produced by Engin Plast for their high qualitative value.

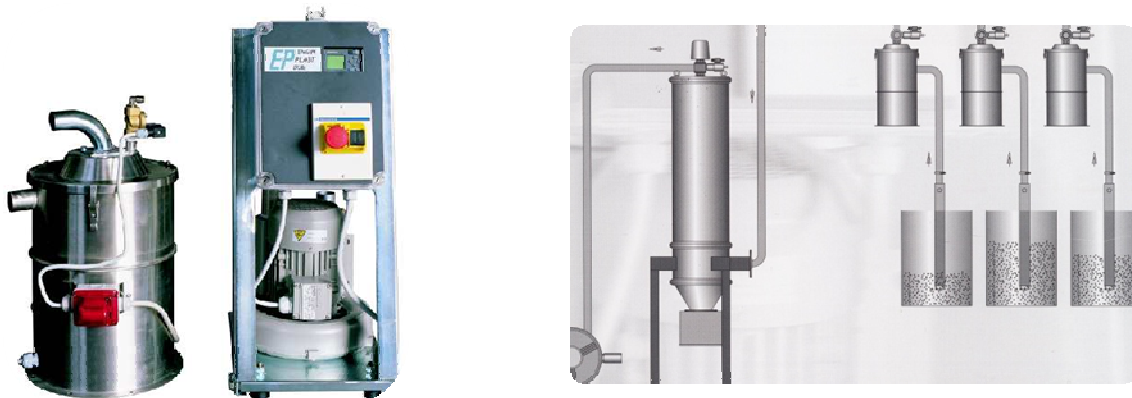

PNEUMATIC CONVEYING

www.enginplast.com www.enginplast.com www.enginplast.com

Full service of high quality

We can ensure the customer a complete service, transporting plastic and non plastic materials, as granules, ground materials and powders.

The high competence in conveying such materials, that completes the dosage systems, results from the long professional and specialized experience that we can **guarantee in the plastics processing**.

THE GRANULATORS

www.enginplast.com www.enginplast.com www.enginplast.com

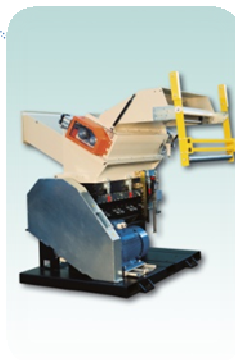

Transforming a “waste” into something precious

Our range of **granulators** meets at all levels the main demands expressed by customers.

All machines, heavy-duty, reliable and not very bulky, have in general the following features:

- Soundproof
- Low energy consumption and low environmental impact
- High safety standards, with additions as to the unified rules

The excellent qualitative features of the material processed by the machine, allow a direct recovery from processing lines.

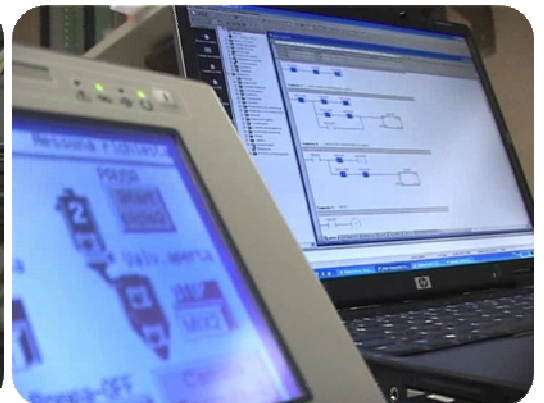

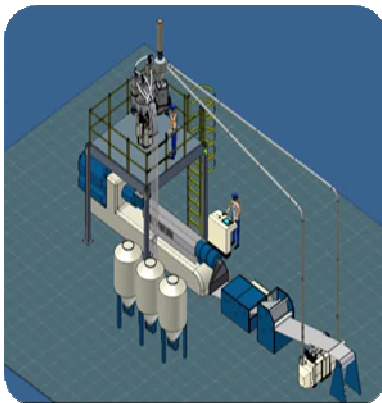

Certificate of reliability

A lot of customers rely on Engin Plast since many years. They don't consider us simple suppliers but also trustworthy partners in consultancy and assistance.

Engaging ourselves to provide higher quality solutions minimizing costs, customers can innovate products and internal processes, thus contributing to the **growth of the competitive advantage**.

Relying on Engin Plast means you can count on different competences that make the difference:

- We are **flexible**, able to adapt to each particular request that is appropriate and capable to ensure value added, after a thorough comparison with the customer;
- We **quickly understand and satisfy our customers needs**, thanks to the qualified technical professionalisms we have; open to listening and communication, they are able to identify the most suitable technological solution, realizing it in short time.
- The high reliability of products makes even more reassuring the **after sales service that we always guarantee**, even after providing the customer with the suitable training to the use of the installed systems.
- We have a **wide range** of production and a **well-stocked spare parts warehouse**.

THE SAFETY OF PRODUCTS BUILT ON VALUES

www.enginplast.com www.enginplast.com www.enginplast.com

An invisible but precious thread

The **passion** for our job is the real energy that guides our steps towards the continuous research and the refinement of internal and external operational dynamics.

Years of **experience** and constant and careful application, allow us today to ensure high levels of **competence and professionalism**, combined with the **reliability** and **transparency** that have always characterized our relationships towards customers and suppliers.

The technical quality of the product we offer is also, therefore, the result of cooperation, respect and fairness that bind us, an invisible but precious thread that allows us to take into right account the value of the person.

RESEARCH AND INNOVATION NATURAL TENDENCY

www.enginplast.com www.enginplast.com www.enginplast.com

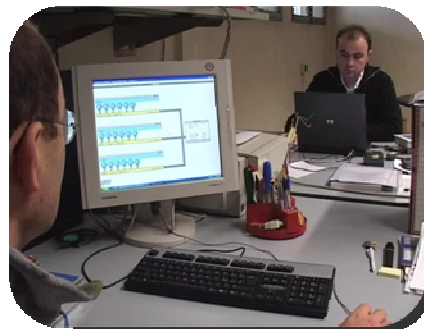

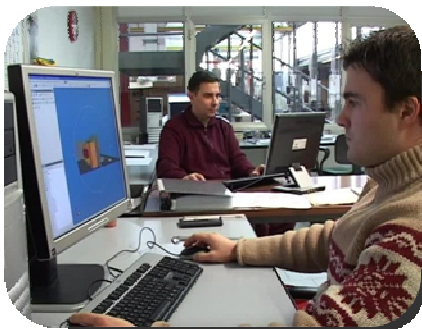

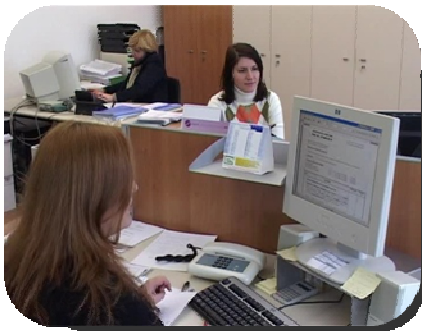

For necessity, a new opportunity

Innovation is not only a technical matter, a rigid method that defines the success of an idea, an intuition, a proposal; it is rather the result of a **mental attitude**, a **psychological predisposition** to be increased through the research, the comparison, the exchange of more points of view.

This "**natural tendency**" to innovation has enabled us to:

- be the first ones, thirty years ago, to carry out the dosage system both by screw and disks.
- plan and realize special combined systems to solve specific problems
- turn measuring devices for individual units into central systems.

All this represents a very sophisticated and high precision technology, which causes, in turn, customer's and our satisfaction, therefore a **mutual growth**.

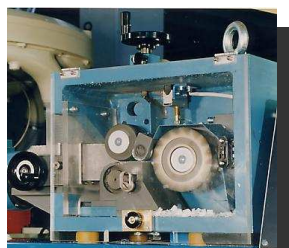

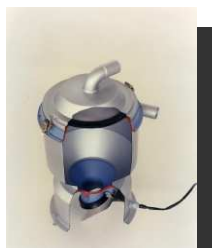

A HISTORY MADE OF MANY HISTORIES

www.enginplast.com www.enginplast.com www.enginplast.com

Family portrait

Our history has interlaced itself with the history of our customers, expressing their needs and their issues, **finally resolved** through the achievement of special leading machineries, with the current technologies.

A union between our passion for research and the wish to fully satisfy customers needs has been realized over the years. This synergy has turned into a history that develops itself through "**old**" **photos**, as in a family album: the Engin Plast "**family**".

ENGINPLAST CHALLENGE

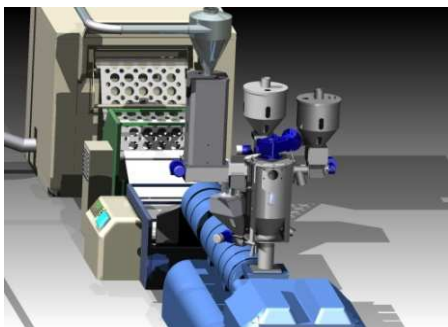

www.enginplast.com www.enginplast.com www.enginplast.com

A common view

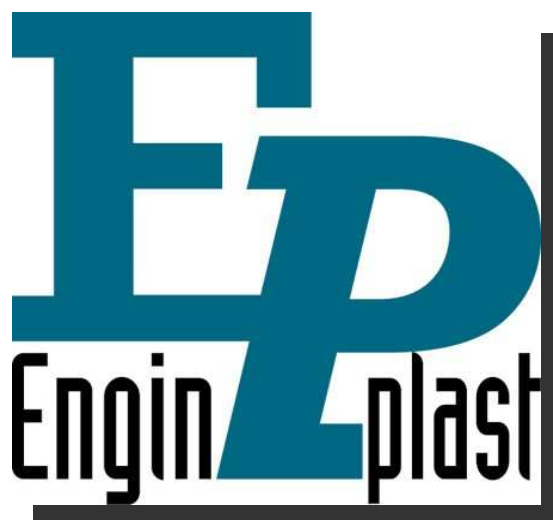

We have an **ambitious dream**, that we share in the **growth** distance we are covering:

“Be part of the history of all our customers”

“Constantly challenge ourselves to make each customer live an unforgettable experience”

Centralised Feeding Systems
